The Maple output is a complex expression enclosed in large square brackets. It consists of several terms, each involving square roots and arctan functions. The terms are arranged in a sequence, with some terms being more complex than others. The overall structure is a sum of these terms, with some terms being multiplied by constants or other functions. The expression is highly detailed and difficult to transcribe exactly, but it represents the antiderivative found by Maple for the given integral.

Verification of antiderivative is not currently implemented for this CAS.

maple [C] time = 0.27, size = 453, normalized size = 5.66

The Maple output shows a highly complex antiderivative involving nested square roots, logarithms, and elliptic integrals. The expression is divided into two main parts, each enclosed in large square brackets. The first part contains several nested square roots and a logarithmic term. The second part contains a similar structure with nested square roots and an elliptic integral function. The entire expression is divided by a denominator that is a product of a square root and a linear term in x^3.

Verification of antiderivative is not currently implemented for this CAS.

maple [C] time = 0.26, size = 457, normalized size = 5.25

The image shows a complex mathematical expression from Maple CAS. It features multiple nested square roots, with the innermost terms involving $\sqrt[3]{-c*d^2}$. The expression is divided by a denominator $3(ad-bc)\sqrt{d^2+c}$. The numerator is a sum of several terms, including products of square roots and an elliptic function EllipticPi with arguments involving $\sqrt[3]{-c*d^2}$ and d .

Verification of antiderivative is not currently implemented for this CAS.
