= Too large to display

## Mathematica [B] (verified)

Leaf count is larger than twice the leaf count of optimal. 4971 vs. 2(2050) = 4100.

Time = 1.32 (sec) , antiderivative size = 4971, normalized size of antiderivative = 2.42

$$\int x(a+b\log(c(d+ex)^n))^3(f+g\log(h(i+jx)^m))\,dx = \text{Result too large to show}$$

## Mathematica [B] (verified)

Leaf count is larger than twice the leaf count of optimal. 4056 vs. 2(742) = 1484.

Time = 0.89 (sec) , antiderivative size = 4056, normalized size of antiderivative = 5.47

$$\int \frac{(i+jx)^2 (a+b\log (c(d(e+fx)^p)^q))^3}{g+hx} dx = \text{Result too large to show}$$

# CHAPTER 4

# APPENDIX

## 4.1 Listing of Grading functions

The following are the current version of the grading functions used for grading the quality of the antiderivative with reference to the optimal antiderivative included in the test suite.

There is a version for Maple and for Mathematica/Rubi. There is a version for grading Sympy and version for use with Sagemath.

The following are links to the current source code.

The following are the listings of source code of the grading functions.

### Mathematica and Rubi grading function

```
(* Original version thanks to Albert Rich emailed on 03/21/2017 *)
(* ::Package:: *)

(* Nasser: April 7,2022. add second output which gives reason for the grade *)
(*                       Small rewrite of logic in main function to make it*)
(*                       match Maple's logic. No change in functionality otherwise*)

(* ::Subsection:: *)
(*GradeAntiderivative[result,optimal]*)

(* ::Text:: *)
(*If result and optimal are mathematical expressions, *)
```

```
(*          GradeAntiderivative[result,optimal] returns*)
(*  "F" if the result fails to integrate an expression that*)
(*      is integrable*)
(*  "C" if result involves higher level functions than necessary*)
(*  "B" if result is more than twice the size of the optimal*)
(*      antiderivative*)
(*  "A" if result can be considered optimal*)

## SageMath grading function

```
#Dec 24, 2019. Nasser: Ported original Maple grading function by
#           Albert Rich to use with Sagemath. This is used to
#           grade Fricas, Giac and Maxima results.
#Dec 24, 2019. Nasser: Added 'exp_integral_e' and 'sng', 'sin_integral'
#           'arctan2','floor','abs','log_integral'
#June 4, 2022  Made default grade_annotation "none" instead of "" due
#           issue later when reading the file.
#July 14, 2022. Added ellipticF. This is until they fix sagemath, then remove it.
