### 3.236.3 Rubi [A] (verified)

Time = 4.29 (sec) , antiderivative size = 836, normalized size of antiderivative = 0.95, number of steps used = 23, number of rules used = 22,  $\frac{\text{number of rules}}{\text{integrand size}} = 0.786$ , Rules used = {5046, 3042, 4672, 3042, 25, 4202, 2620, 3011, 2720, 5046, 3042, 3804, 2694, 27, 2620, 3011, 4671, 3011, 7143, 7163, 2720, 7143}

Below are the steps used by Rubi to obtain the solution. The rule number used for the transformation is given above next to the arrow. The rules definitions used are listed below.

$$\int \frac{(e+fx)^3 \csc^2(c+dx)}{a+b \sin(c+dx)} dx$$

### 3.346.2 Mathematica [B] (warning: unable to verify)

Both result and optimal contain complex but leaf count is larger than twice the leaf count of optimal. 5075 vs.  $2(1051) = 2102$ .

Time = 9.37 (sec) , antiderivative size = 5075, normalized size of antiderivative = 4.83

$$\int \frac{(e+fx)^2 \cos^3(c+dx) \cot^2(c+dx)}{a+b \sin(c+dx)} dx = \text{Result too large to show}$$

input `Integrate[((e + f*x)^2*Cos[c + d*x]^3*Cot[c + d*x]^2)/(a + b*Sin[c + d*x]),x]`

output `Result too large to show`

**3.346.3 Rubi [F]**

Below are the steps used by Rubi to obtain the solution. The rule number used for the transformation is given above next to the arrow. The rules definitions used are listed below.

$$\int \frac{(e+fx)^2 \cos^3(c+dx) \cot^2(c+dx)}{a+b \sin(c+dx)} dx$$

4.1 Listing of Grading functions . . . . .	2727
--	------

## 4.1 Listing of Grading functions

The following are the current version of the grading functions used for grading the quality of the antiderivative with reference to the optimal antiderivative included in the test suite.

There is a version for Maple and for Mathematica/Rubi. There is a version for grading Sympy and version for use with Sagemath.

The following are links to the current source code.

The following are the listings of source code of the grading functions.

### 4.1.1 Mathematica and Rubi grading function

```
(* Original version thanks to Albert Rich emailed on 03/21/2017 *)
(* ::Package:: *)

(* Nasser: April 7,2022. add second output which gives reason for the grade *)
(*           Small rewrite of logic in main function to make it*)
(*           match Maple's logic. No change in functionality otherwise*)

(* ::Subsection:: *)

#### 4.1.4 SageMath grading function

```
#Dec 24, 2019. Nasser: Ported original Maple grading function by
#      Albert Rich to use with Sagemath. This is used to
#      grade Fracas, Giac and Maxima results.
#Dec 24, 2019. Nasser: Added 'exp_integral_e' and 'sng', 'sin_integral'
#      'arctan2', 'floor', 'abs', 'log_integral'
#June 4, 2022 Made default grade_annotation "none" instead of "" due
#      issue later when reading the file.
#July 14, 2022. Added ellipticF. This is until they fix sagemath, then remove it.
