Rubi [B] (verified)

Leaf count is larger than twice the leaf count of optimal. 1697 vs. $2(566) = 1132$.

Time = 2.32 (sec) , antiderivative size = 1697, normalized size of antiderivative = 3.00, number of steps used = 25, number of rules used = 24, $\frac{\text{number of rules}}{\text{integrand size}} = 0.800$, Rules used = {426, 426, 421, 25, 402, 25, 402, 25, 27, 291, 221, 407, 291, 221, 426, 421, 25, 291, 221, 402, 25, 27, 291, 221}

Below are the steps used by Rubi to obtain the solution. The rule number used for the transformation is given above next to the arrow. The rules definitions used are listed below.

```

Rubi [B] (verified)

Leaf count is larger than twice the leaf count of optimal. 645 vs. 2(284) = 568.

Time = 1.15 (sec) , antiderivative size = 645, normalized size of antiderivative = 2.27, number of steps used = 27, number of rules used = 26, $\frac{\text{number of rules}}{\text{integrand size}} = 0.867$, Rules used = {425, 419, 25, 401, 25, 27, 299, 224, 219, 403, 25, 398, 224, 219, 291, 221, 425, 402, 25, 27, 291, 221, 402, 27, 291, 221}

Below are the steps used by Rubi to obtain the solution. The rule number used for the transformation is given above next to the arrow. The rules definitions used are listed below.

Rubi [B] (verified)

Leaf count is larger than twice the leaf count of optimal. 836 vs. 2(395) = 790.

Time = 1.13 (sec) , antiderivative size = 836, normalized size of antiderivative = 2.12, number of steps used = 16, number of rules used = 15, $\frac{\text{number of rules}}{\text{integrand size}}$ = 0.500, Rules used = {425, 425, 402, 25, 27, 291, 221, 402, 27, 291, 221, 402, 27, 291, 221}

Below are the steps used by Rubi to obtain the solution. The rule number used for the transformation is given above next to the arrow. The rules definitions used are listed below.

Rubi [B] (verified)

Leaf count is larger than twice the leaf count of optimal. 568 vs. 2(148) = 296.

Time = 0.58 (sec) , antiderivative size = 568, normalized size of antiderivative = 3.84, number of steps used = 6, number of rules used = 5, $\frac{\text{number of rules}}{\text{integrand size}} = 0.147$, Rules used = {429, 324, 320, 388, 313}

Below are the steps used by Rubi to obtain the solution. The rule number used for the transformation is given above next to the arrow. The rules definitions used are listed below.

CHAPTER 4

Appendix

4.1 Listing of Grading functions

The following are the current version of the grading functions used for grading the quality of the antiderivative with reference to the optimal antiderivative included in the test suite.

There is a version for Maple and for Mathematica/Rubi. There is a version for grading Sympy and version for use with Sagemath.

The following are links to the current source code.

The following are the listings of source code of the grading functions.

Mathematica and Rubi grading function

Maple grading function

```
# File: GradeAntiderivative.mpl
# Original version thanks to Albert Rich emailed on 03/21/2017

#Nasser 03/22/2017  Use Maple leaf count instead since buildin
#Nasser 03/23/2017  missing 'ln' for ElementaryFunctionQ added
#Nasser 03/24/2017  corrected the check for complex result
#Nasser 10/27/2017  check for leafsize and do not call ExpnType()
#                   if leaf size is "too large". Set at 500,000
#Nasser 12/22/2019  Added debug flag, added 'dilog' to special functions
#                   see problem 156, file Apostol_Problems
#Nasser 4/07/2022   add second output which gives reason for the grade
